

# Logihedron Inc.

## CASE STUDY

### The Apps on Tap Solution

Apps on Tap consolidated all the data from the various workstations and notebooks to their datacenter and provided On-Demand access to Logihedron's applications and data from any location.

To improve their communications, Logihedron subscribed to Apps on Tap Hosted Exchange giving users enterprise class email with shared contacts, calendars and group scheduling.

*"Security and support were major considerations as well. Finally we needed something that was affordable for the relatively small size of our company."*

Logihedron's data and applications were now housed in the Apps on Tap secure datacenter providing them with Anywhere, Anytime access, daily backups, enterprise class network administration and more for a fixed monthly fee.

### Benefits

Logihedron quickly gained a professionally managed IT infrastructure by subscribing to Apps on Tap Application Hosting services.

*"Our team was new to working in an Exchange environment and we are still realizing numerous benefits day in day out."*

*"There are far too many benefits to mention, but the ease of accessibility is easily the best feature of Apps on Tap. Having the ability to access our information from any client site we may be at and being able to synchronize with PDA's is a major benefit for me."*

*"I am pleased with the overall performance of the service and the support team at Apps on Tap. They are always available to address your concerns and actually treat the client like they're important. It's a welcome surprise compared to the experiences that I've encountered with big corporate IT teams."*

*"I would definitely recommend Apps on Tap to other organizations."*

Logihedron Inc. is a logistics management and consulting organization primarily focused on the healthcare industry. Logihedron works with individual facilities, multi-site organizations and regional healthcare groups to develop leading edge sustainable solutions that provide total supply chain and service continuum management. They are a flexible, dynamic organization that truly has a "make it happen" attitude.

Logihedron is a team of professionals working much of the time at their clients' sites, each with their own systems.

Steve James, Warehouse Operations Manager describes their IT environment; "Our On-Premise IT environment resided wherever we were working. We had no infrastructure as such. Our data was not organized and files were passed on via email or memory stick. We needed to centralize our information."

*"We needed to be able to access our data from any of our roaming work environments. We needed something that was easy to use and customizable for our various requirements. We also needed to share our contacts and better organize our management team."*

### IT Environment and Challenges

Logihedron had no Server infrastructure whatsoever. Employees worked on desktops and notebooks at the office and at client sites. Data was on each individual workstation and was shared using memory sticks and email. Backups were the responsibility of each user.

### Technology Summary

- Windows XP Desktops / Notebooks
- Memory Sticks
- POP email

### Key requirements

- Centralize data
- Provide access to data for all users
- Secure data
- Shared contacts and calendars

*"We receive excellent support from the Apps on Tap team beyond our normal experiences with numerous IT teams we have dealt with."*

Steve James, Logihedron Inc.
